(54) Title: **ELECTRIC DEVICE, SYSTEM AND METHOD**

(57) Abstract: An electric device (100) is suitable for use in first orientations (101) and in second orientations (102). The electric device (100) has a first function (103), a second function (104) and a user interface (105) with a first part (106) and a second part (107). In response to activating either of the parts (106), (107), one of the functions (103), (104) is performed by the electric device (100). To achieve a more consistent user interface (105), the mapping from part activated to function performed is adapted in dependence upon an orientation in use. The orientation in use is detected with a detector (108) comprising a gravity sensor (109). The gravity sensor (109) can contribute to distinguishing left from right and inside in from inside out.
